1. Technology Stack

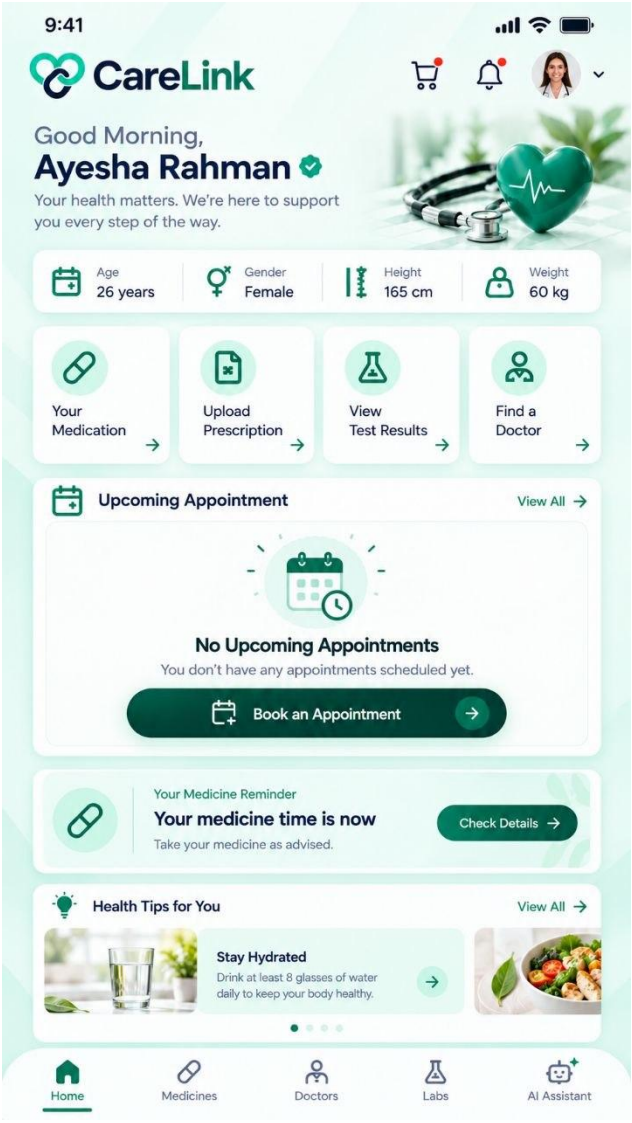

Component	Technology
1. Mobile Application Framework	Flutter (Dart)
2. Backend Framework	Django (Python)
3. API Framework	Django REST Framework
4. Database	PostgreSQL
5. AI Integration	Google Gemini API
6. Cloud Services	Firebase

2. Features and Page Designs

2.1 Homepage for customers/Patients:

The CareLink home page brings essential healthcare services together, offering customer/patient quick access to medicines, prescriptions, test results, and doctors along with appointment updates, medication reminders and health tips.

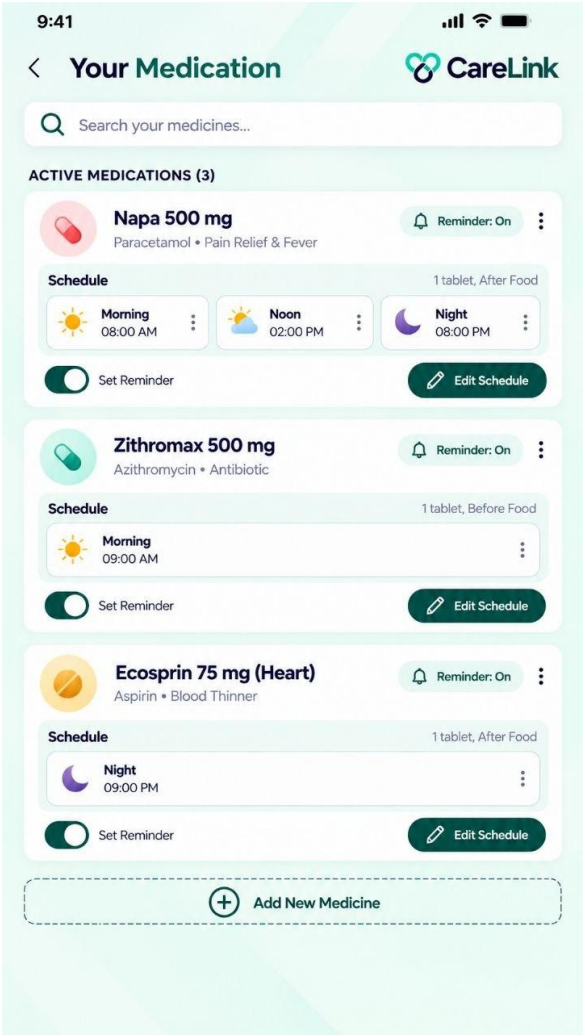

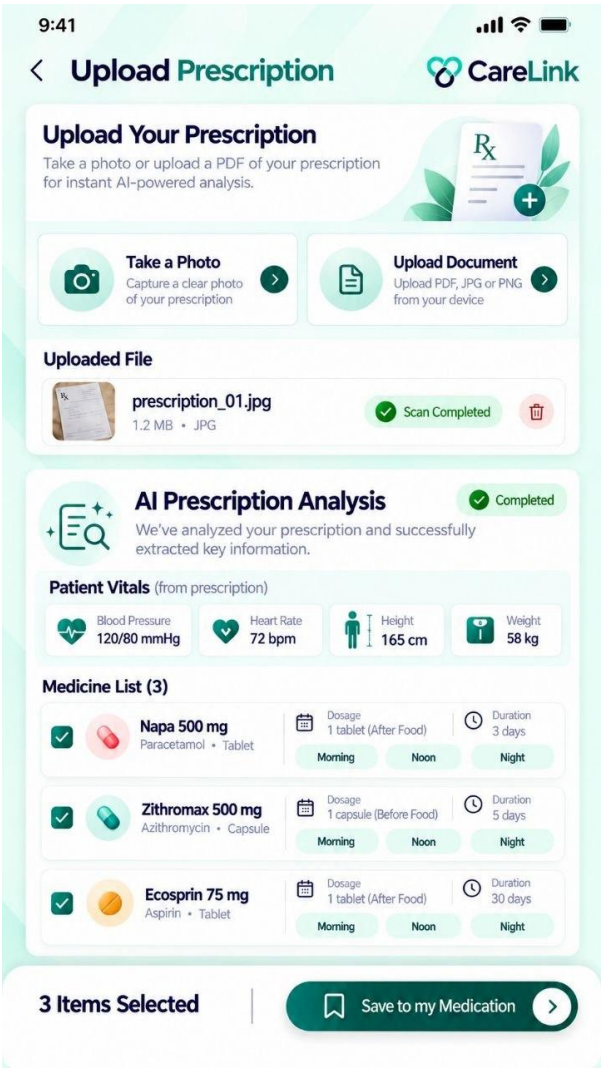

2.2 Patient's Medication and Upload Prescription Page:

Your Medication page helps users manage their daily medicines by viewing active medications, checking dosage schedules, and setting reminders for each dose. Users can also edit schedules, turn reminders on or off, search their medication list, and add new medicines.

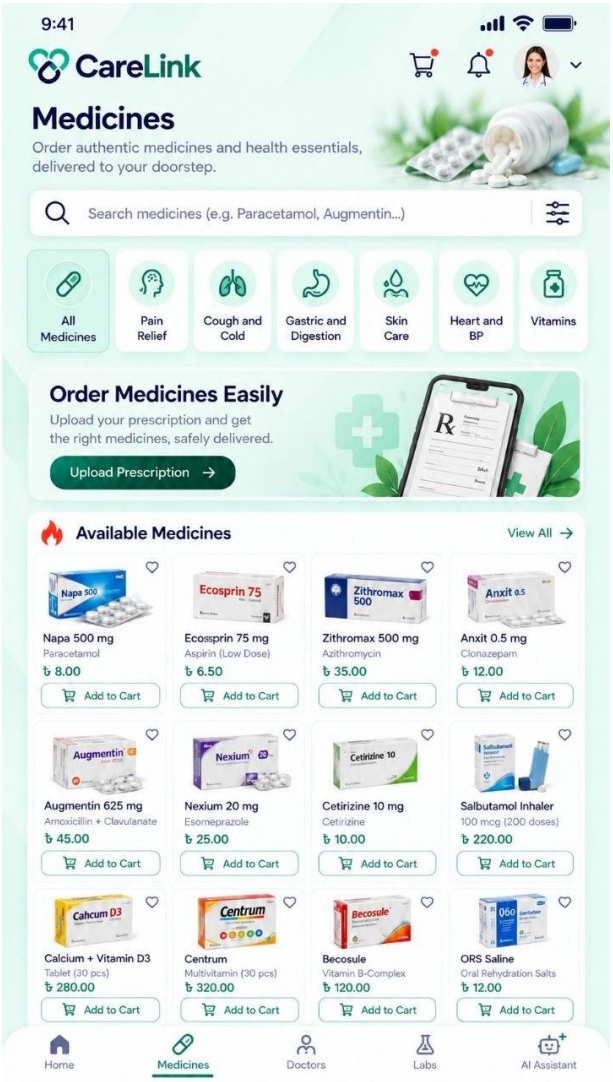

Users can upload a prescription, let AI extract medication details and patient vitals, and then save the selected medicines to the patient's medication list.

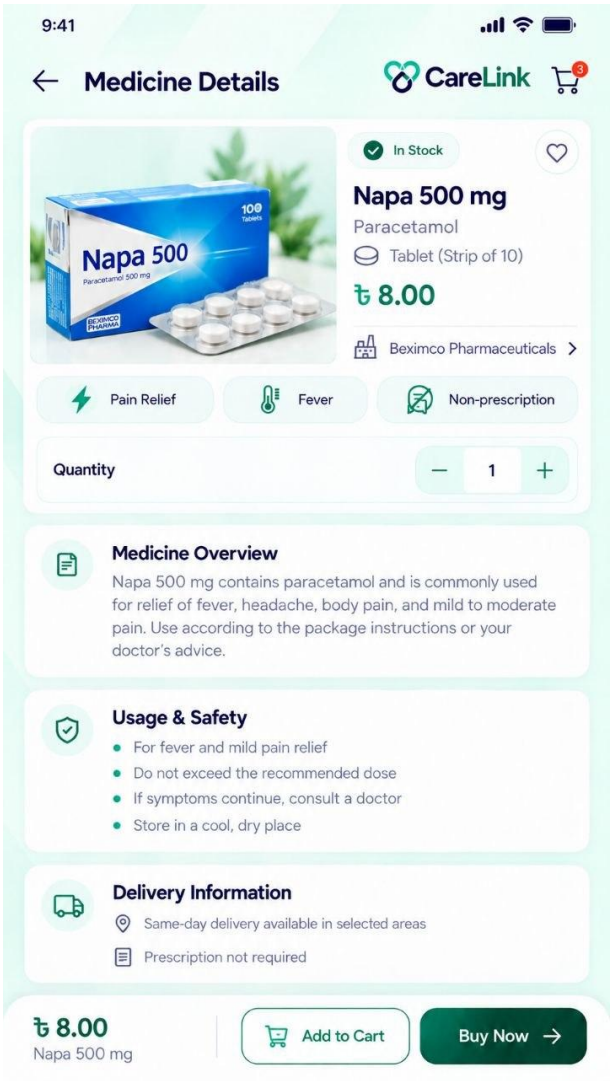

2.3 Medicine Shopping Page:

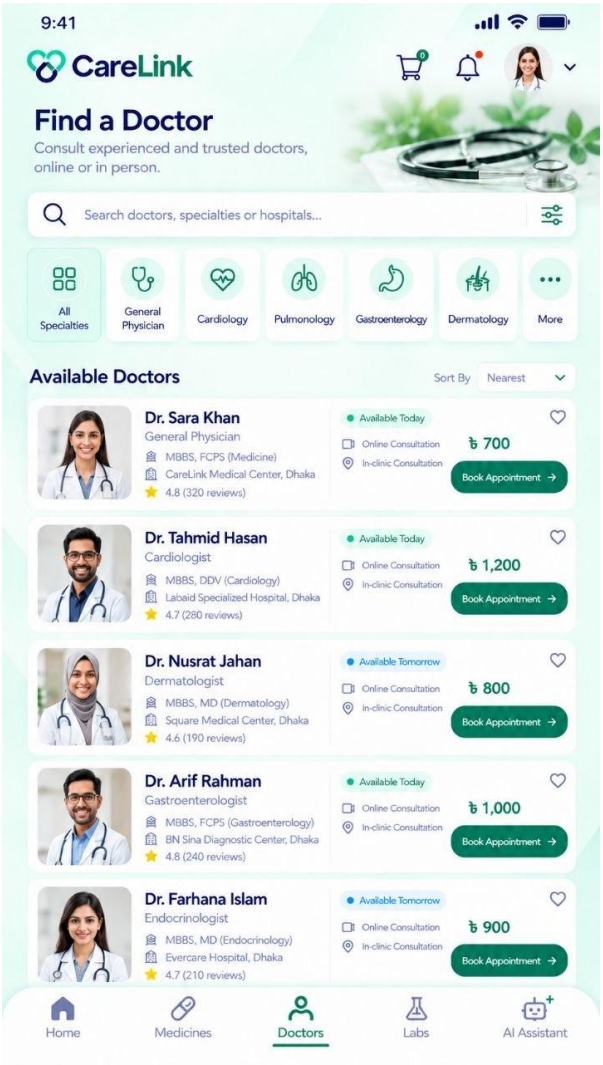

Users can search and browse medicines by category, view product prices and availability, and add items to their cart. The medicine details page provides information about the product, manufacturer, usage and safety, quantity selection, and delivery options, with Add to Cart and Buy Now buttons.

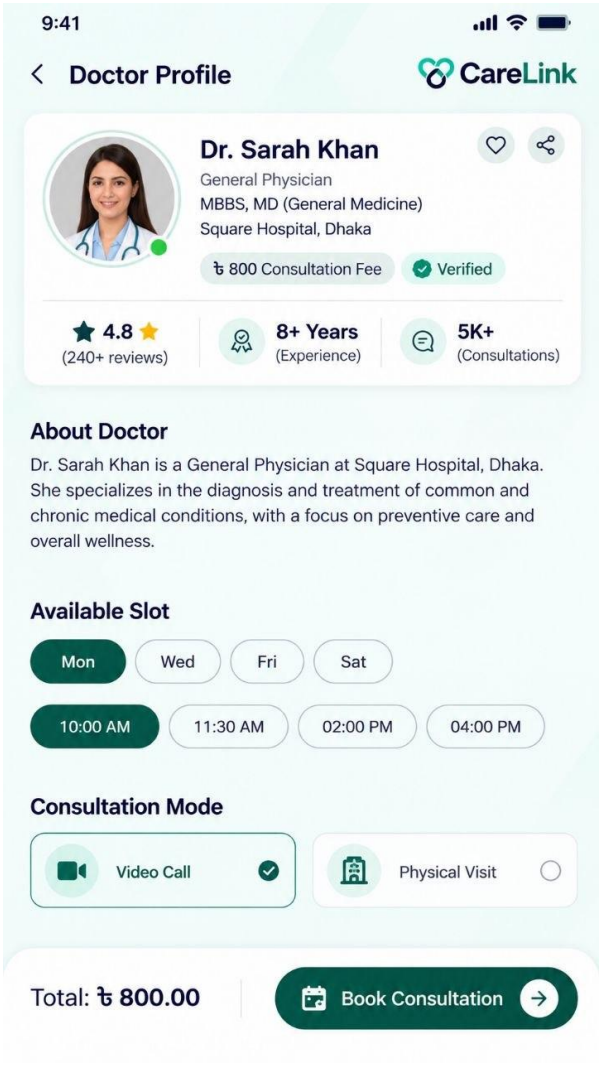

2.4 Doctor Finding and Booking Page:

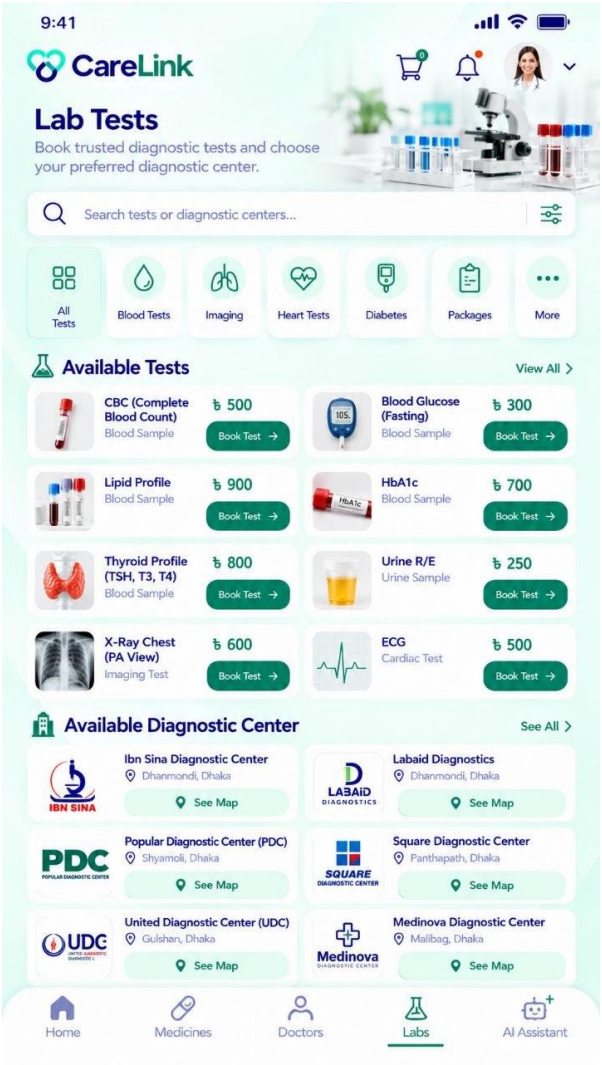

Users can search and filter doctors by specialty, view their profiles, qualifications, ratings, fees, and availability, then choose a preferred time and consultation mode to book an online or in-person appointment easily.

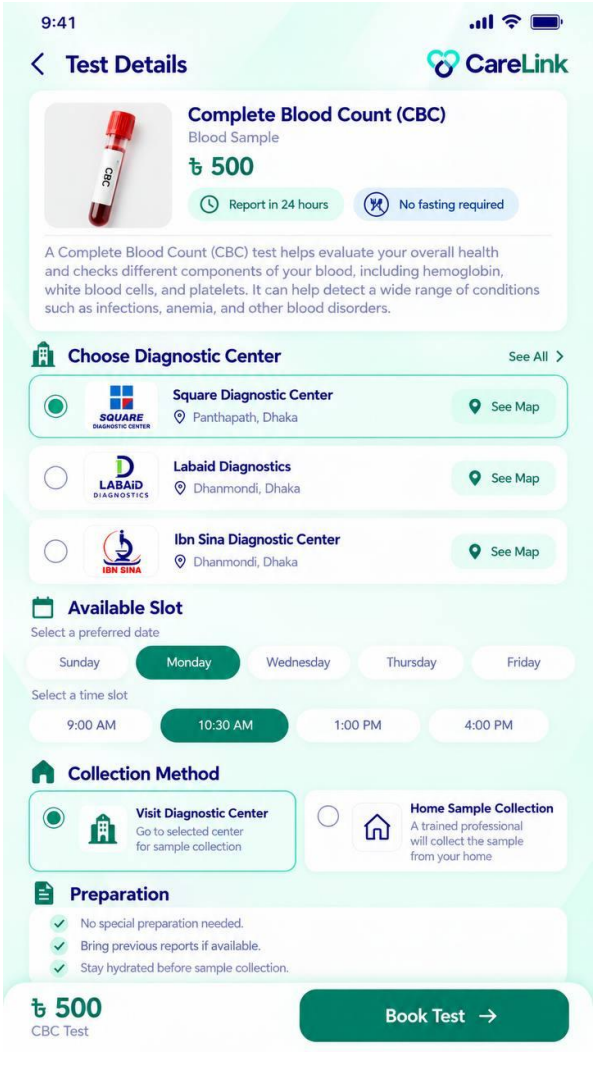

2.5 Lab Test Finding and Booking Page:

Users can browse and choose lab tests, choose diagnostic centers, select appointment slots, and book tests with home or center sample collection.

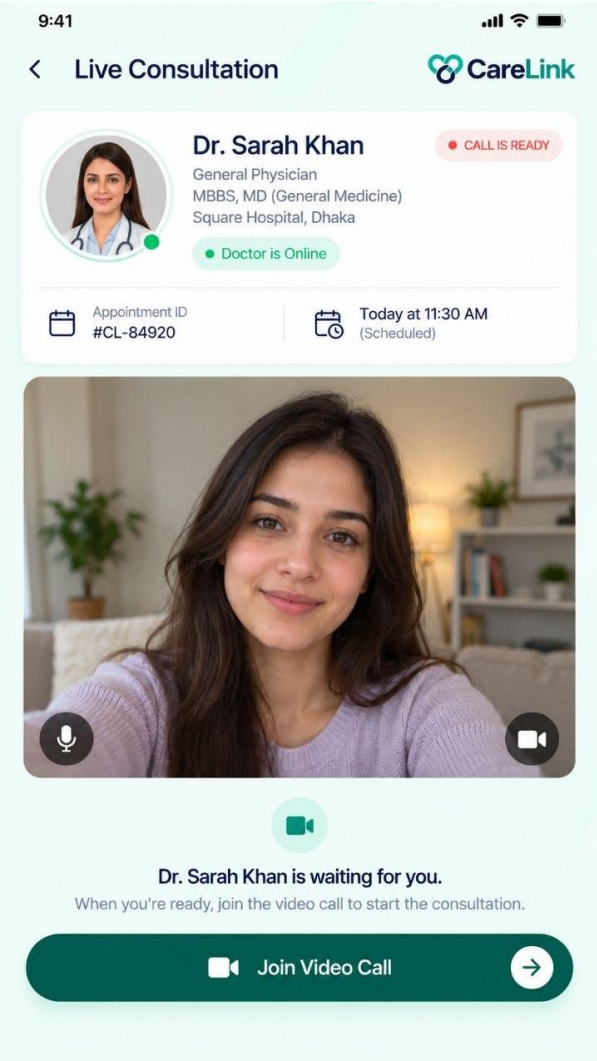

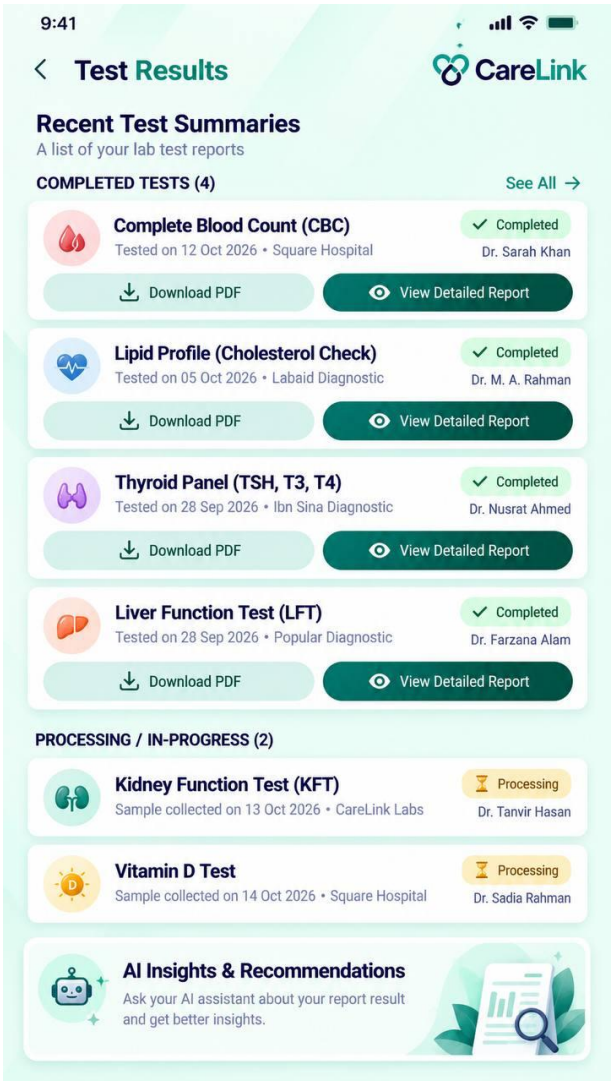

2.6 Doctor’s Consultation Page and Patient’s Test Result Page:

From the doctor's consultation page users can check their appointment details, preview the video call, control their microphone and camera, and join the live consultation with one tap.

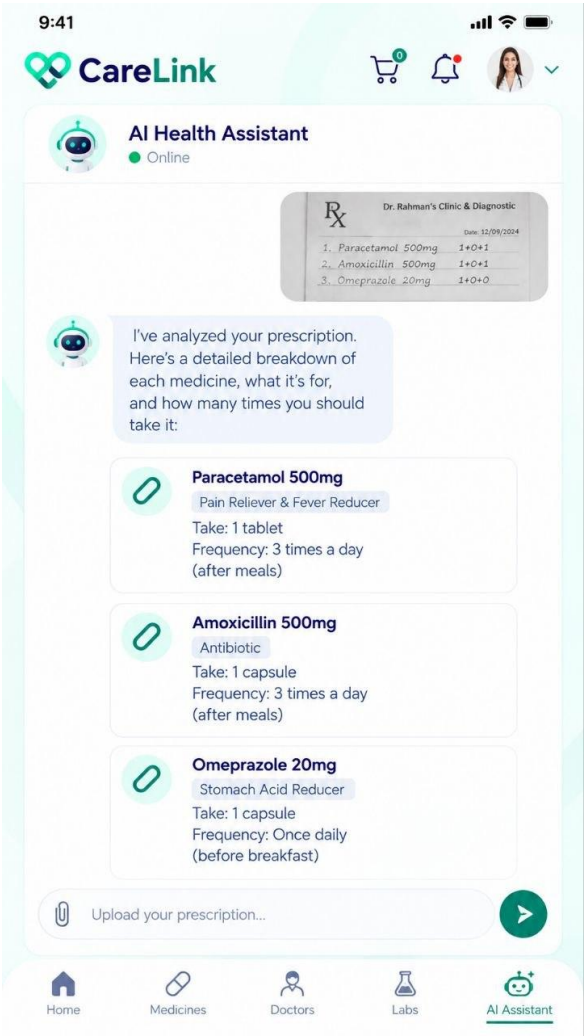

From the test result page users can view, download, and track lab test reports, check processing status, and get AI-powered insights and recommendations.

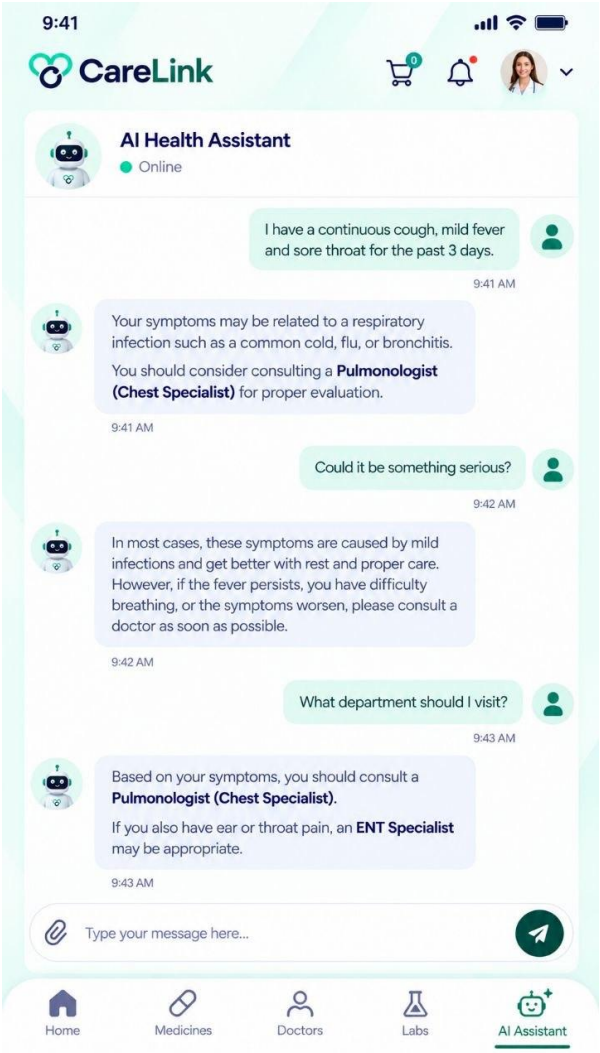

2.7 AI Assistant Page:

User can chat with an AI health assistant for symptom guidance, specialist recommendations, health tips, prescription analysis with medicine details and dosage instructions and report analysis with better insights of results.

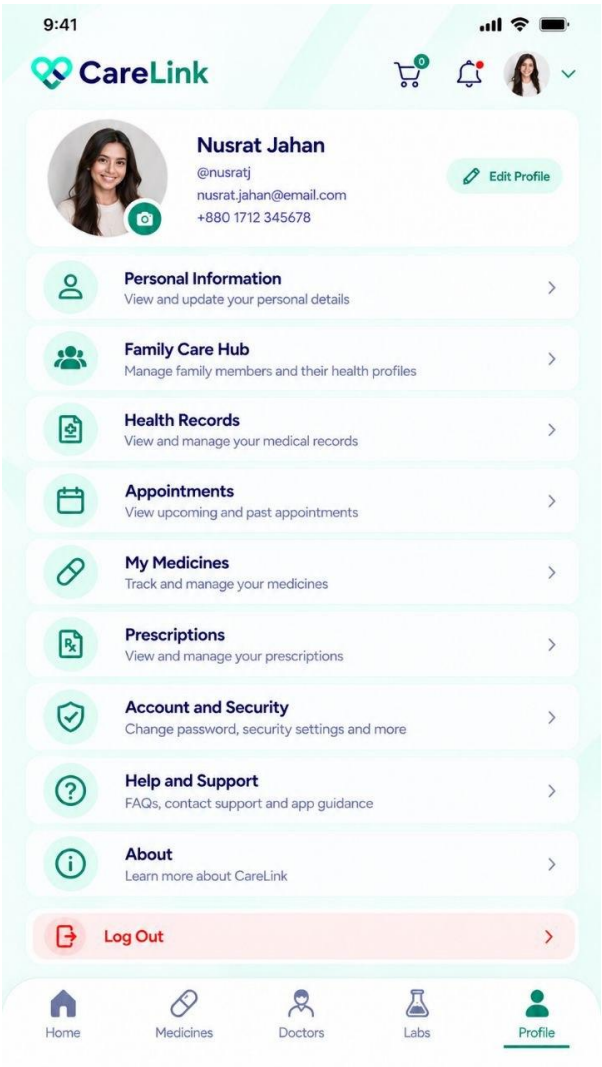

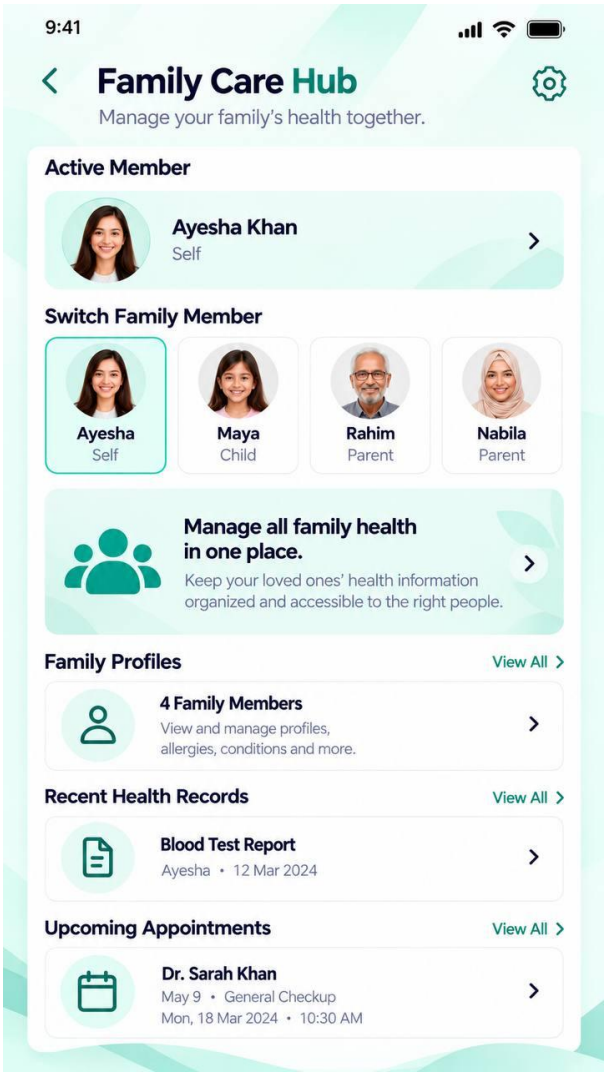

2.8 Profile Page and Family Care Hub Page:

From the profile page, users can manage their profile, personal and family health records, appointments, medicines, prescriptions, security settings, and support options in one place.

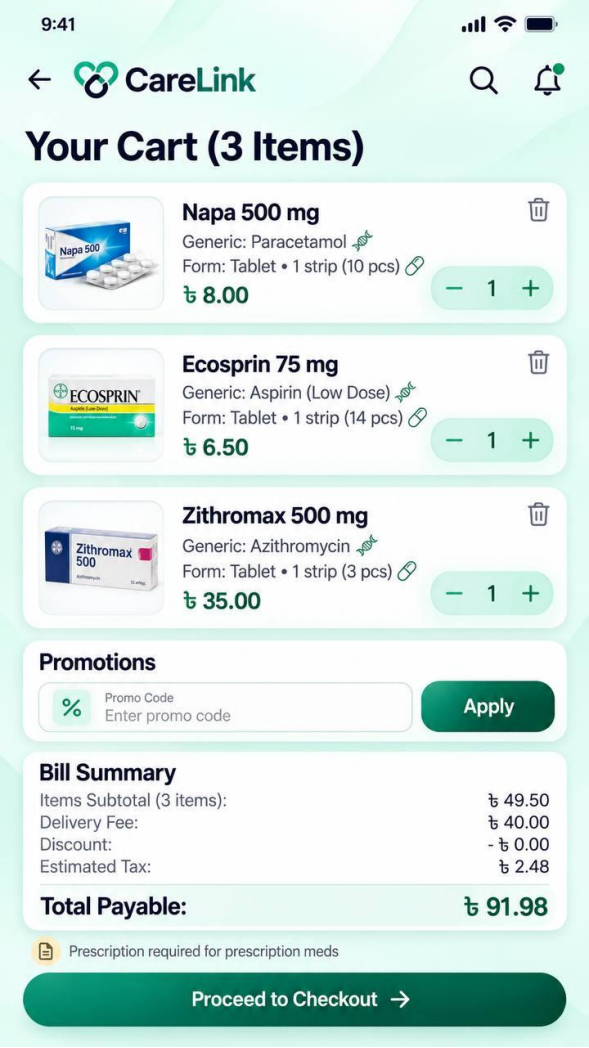

From the Family Care Hub page users can manage family members' health profiles, switch between members, view medical records, and track upcoming appointments in one place.

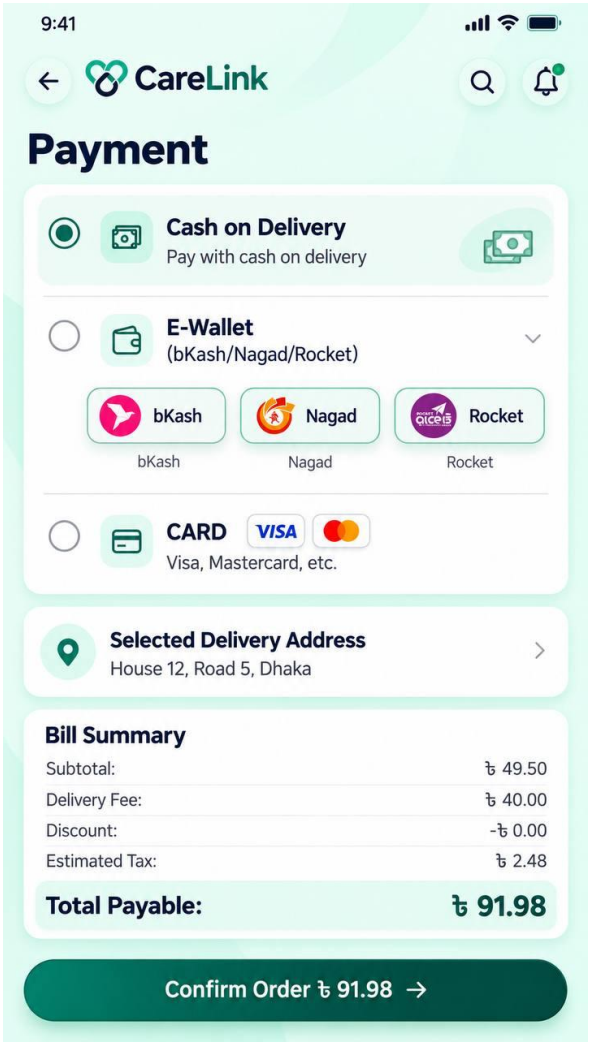

2.9 Cart and Confirm Order Page:

Users can review medicines in the cart, adjust quantities, apply promo codes, check the bill, choose a payment method, and confirm the order.

2.10 Doctors View Pages:

Doctors can manage appointments, confirm or decline bookings, join online consultations, track patient visits, and update their professional profile, qualifications, fees, and availability.

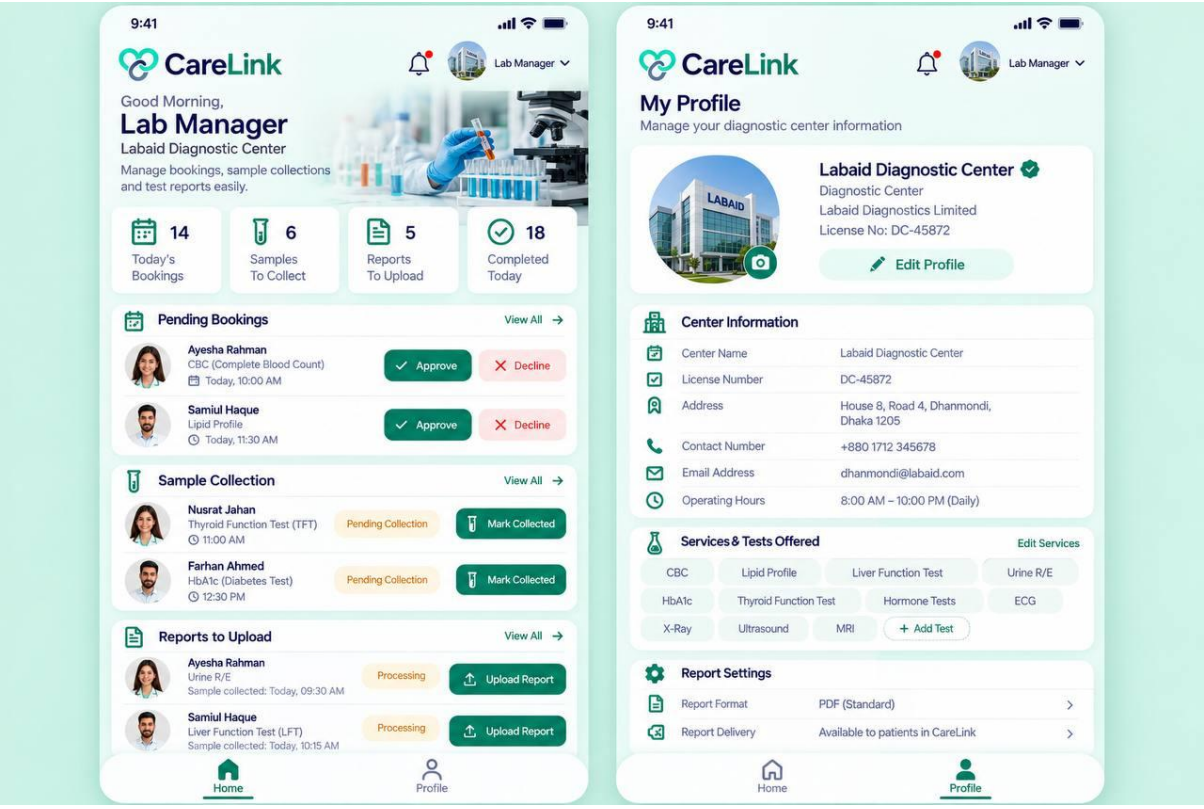

2.11 Pharmacist's View Pages:

Pharmacists can review prescriptions, manage medicine orders, track low-stock alerts, monitor order status, and update their professional and pharmacy information.

2.12 Diagnostic Center's View Pages:

Lab managers can manage test bookings, approve requests, track sample collection, upload reports, and update diagnostic center details, services, and report settings.

2.13 Admin's View Pages:

Admins can manage users, approve doctors, pharmacies, and diagnostic centers, oversee services, monitor system reports, and configure account and security settings.
